

BH Series Solid State Drive Performance Test

The BH series extreme performance SATA-II SSD uses an advanced new controller and 64MB DRAM cache to deliver exceptionally fast sequential read and write speeds. With no moving parts, the BH is lightweight, uses far less power and is much more resistant to shock and vibration than a hard disk drive. The BH series SSD is also packed with all the latest performance and reliability features. ECC, wear leveling and bad bit management

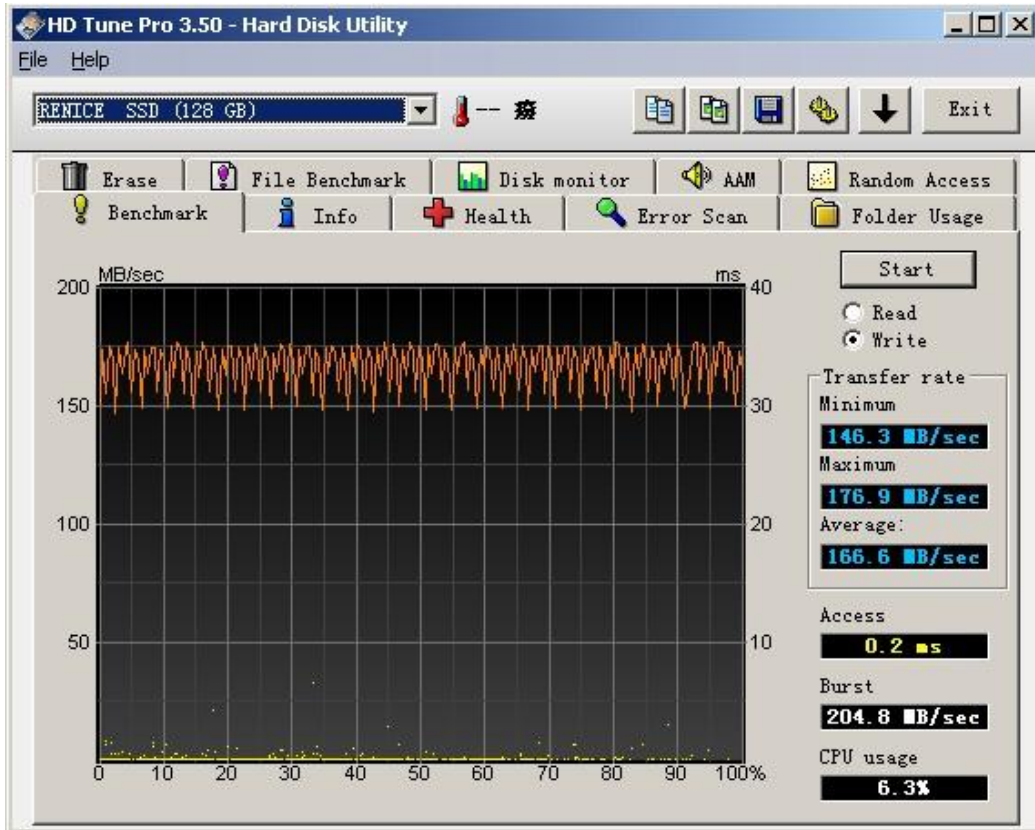

algorithms improve reliability and extend the life of the drive.
